RRCUSTOMS

RRCUSTOMS

RRCustoms is a company associated with the automotive industry for over 20 years. At the beginning the company has been focused on service activity, especially in car detailing, car wrapping and custom cars construction. We've gained a lot of experience related to the industry over the years. RR Customs brand became recognizable in motoring community. The next steps of evolution was making of trade offer, then starting of our own production of car parts and accesories.

Currently RRCustoms is leading producer of car cosmetics, polishing pads, wheel spacers and automotive window films. Over 90% of production takes place in Poland, in our factories in Kielce. We have our own chemical laboratory in which we develop new product formulas. We are proud of providing a premium class products in attractive price range. All our products are the result of experience, professionalism and passion for the automotive industry. We sell them in over 30 countries but we focus above all, for development and introducing more products to offer, also conquering new markets.

Meeting the expectations of our demanding clients, we still improve our own recipes. In the coming years we plan to build new production plants and warehouses to begin non European markets expansion.

RRCUSTOMS CLASSIC

A series of pads with the most universal shape. Thanks to the rounded edges ideal for working on flat and slightly concave surfaces. The highest quality foam used for production allows the most effective use of the paste on every surface. Five millimeter milling cutter on the fastening side and reduced circumference significantly increase comfort when polishing at a concave. CLASSIC pads are produced in three diameters and in six degrees of hardness easy to identify thanks to markings color.

Available diameters: 80mm, 135mm, 150mm

Available width: 25mm

RRCUSTOMS CLASSIC DA

The series is adapted to work with Dual Action machines. Centrally located hole allows better ventilation of the backing plate and prevents clumping and crystallization of paste particles in the middle part of the pad due to orbital movement.

Available diameters: 80mm, 135mm, 150mm

Available width: 25mm

RRCUSTOMS

PRO

Pads shaped to facilitate polishing precision. Perfect for work on flat surfaces and at the edges. A special pad profile with trapezoidal cross section provides perfect precision of work at the edges and bends. Larger pad base area ensures maximum stability of the polishing machine (especially recommended for Dual Action machines). The highest quality foam used for production allows for maximum effective use of the paste on each surface. The sloping edge makes it easier to work the machine in hard to reach places. PRO pads are produced in three diameters and in six degrees of hardness easy to identify thanks to color markings.

Available diameters: 80mm, 135mm, 150mm

Available width: 25mm

RRCUSTOMS

PRO DA

The series is adapted to work with Dual Action machines. Centrally located hole allows better ventilation of the backing plate and prevents clumping and crystallization of paste particles in the middle part of the pad due to orbital movement.

Available diameters: 80mm, 135mm, 150mm

Available width: 25mm

RRCUSTOMS WAVE

Pads with a wavy shape work surface. The corrugated profile minimizes formation of swirl marks and holograms. The highest quality foam used for production allows for maximum effective use of the paste on any surface. Notched tabs facilitate working on slightly convex surfaces. WAVE pads are produced in three diameters and in six degrees of hardness that are easy to identify due to color markings.

Available diameters: 80mm, 135mm, 150mm

Available width: 25mm

RRCUSTOMS ZIGZAG

The unique, easy-to-follow pad design is created for work on soft varnishes Zigzag has better heat dissipation through the shape of the incision, making it also great on freshly varnished elements. Recommended for work with One Step pastes or the so-called second step pastes. Produced only in one hardness (medium soft). For use on a rotary machine only (orbital machines are not recommended)

Available diameters: 80mm, 135mm, 150mm

Available width: 25mm

RRCUSTOMS

HEXA

The hexagonal pattern facilitates and accelerates the enhancement of gloss and increases the air flow and cooling properties, while ensuring an even cut. The edges of the pattern allow you to work out abrasive particles better, which translates into more effective ones use of paste, and thanks to the cuts we have better temperature control during work. The rounded pad profile with the pattern, increases polishing efficiency on arcs and contours allowing smoother work in hard to reach places. The pattern is especially recommended for working with a rotary machine, it is also recommended for working with orbital machines.

Available diameters: 80mm, 135mm, 150mm

Available width: 25mm

RRCUSTOMS

MICRO/NANO

A series of small pads designed for special polishing work precision. They work great with pneumatic, rotary and Dual Action machines. They are characterized by extremely high handling precision thanks to the straight edges of the side walls and proportionally reduced height in relative to their larger counterparts. The cylindrical shape enables precise polishing and accurate guidance in the most demanding and inaccessible areas. MICRO / NANO are perfect for renovating: varnished decorative strips, interior decorations, thresholds / recesses and other details. Supreme quality foam used for production allows for maximum efficiency use of paste on any surface.

Available diameters: 50mm, 33mm

Available width: 10 mm

RRCUSTOMS FELT PAD

Pads designed to remove scratches, matting or stains from the glass surface, metal, stone, wood and very hard plastics. Working layer made only of pressed fiber of high quality wool, ensures maximum durability and efficiency of polishing hard surfaces. Fastening with special layer polyamide velor together with a suitable adhesive guarantee the felt pad highest quality and durability. We recommend using a hard backing plate. The felt pad is not recommended for polishing very soft metals and galvanic coatings. Perfect when working with Glass Polishing Paste.

Available diameters: 125mm, 70mm

Available width: 5mm

RRCustoms pads **density scale**

RRC blue polishing pads have the highest hardness.

They are designed for effective removal of matting and deep scratches from hard surfaces, varnishes and plastics. Thanks to the use of closed-cell foams, they are perfect for working with so-called first step pastes like SUPER HEAVY CUT and HEAVY CUT. Perfect for preparing surfaces for the next stages polishing.

RRC white polishing pads are characterized by high hardness.

They are intended for removing deep scratches and mattes. The foam structure allows you to work with pastes HEAVY CUT and MEDIUM CUT. They work well when cutting medium hard varnishes and at polishing hard varnishes.

RRC orange polishing pads have medium hardness.

They are designed to remove deep scratches and matting on soft varnishes and plastics and for polishing medium hard varnishes. The foam structure perfectly holds the paste on the pad surface allowing it complete work out. Perfect for cooperation with MEDIUM CUT type pastes. They can be used for ONE STEP corrections.

RRC yellow polishing pads are also medium hard pads.

They are intended for polishing medium-hard and soft varnishes and plastics. They are characterized most optimal construction of foam cells enabling perfect work with ONE STEP correction or work at the polishing stage.

RRC red polishing pads are characterized by medium softness.

They are intended for polishing very soft varnishes and plastics and for finishing hard varnishes. Designed to work with polishing and finishing pastes. Perfectly they work well with all-in-one preparations and dedicated 3in1 pastes.

RRC black polishing pads are soft pads.

They are intended for surface finishing with anti-hologram and SUPER FINISH pastes. They serve primarily all to quickly get rid of swirl marks or holograms on varnish and plastic. Super soft, open-cell foam structure also allows the use of glaze, wax cleaners and mechanical wax application. Designed to achieve a "mirror effect" at the finishing stage.

RRC PADS

RRC PADS is a series of pads for professional polishing. They are made with the greatest precision, from best quality components. Valued for strength and quality of workmanship. Each pad is subjected to rigorous tensile and temperature control. Production takes place on specialized CNC machines improving the quality of the final product. All models allow for mechanical polishing and grinding of surfaces using polishing pastes and matting pastes. Solid velor ensures the strongest fastening, increasing comfort and safety of use. Pads can be used both wet and dry at speeds of 600-2500 RPM for rotary machines and 2000-5500 OPM for Dual Action type machines.
